Response to Amendment

The Amendment, filed on 1/13/09, has been entered and acknowledged by the Examiner.

Cancellation of claim(s) 1, 4-5, 9-10, 14-15 has been entered.

Claim(s) 2-3, 6-8, 11-13 are pending in the instant application.

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Response to Arguments

Applicant's argument(s) filed on 1/13/09 have been fully considered but are moot since Applicant's amendment(s) have overcome the prior art of record.

Allowable Subject Matter

A. Claim(s) 3, 2 are allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance:

The prior art of record (most comprehensive prior art of record to U.S. Pat. No. 6271902 of Ogura et al.) teaches a color electroluminescent display device comprising: a plurality of color pixels; a plurality of color filter layers provided for the color pixels on an insulating substrate, each of the color filter layers allowing a transmission of light of a color of a corresponding color pixel; an anode layer formed directly on each of the color filter layers; a white electroluminescent layer formed on the anode layers; and a cathode layer formed on the white electroluminescent layer, wherein end portions of the color

Art Unit: 2889

filter layers are tapered, and the tapered end portions of adjacent color filter layers overlap each other.

However, the prior art of record neither anticipates nor renders obvious to one ordinary skilled in the art the color electroluminescent display device comprising the various elements as claimed above in combination with the specific limitation of the color filter layers having different thicknesses and end portions of thinner color filter layers being disposed on end portions of thicker color filter layers as set forth in Claim 3.

Claim(s) 2 are allowable because of their dependency status from Claim 3.

B. Claim(s) 6 are allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance:

The prior art of record (most comprehensive prior art of record to U.S. Pat. No. 6271902 of Ogura et al.) teaches a color electroluminescent display device having a plurality of color pixels, comprising: a plurality of color filter layers provided for the color pixels on an insulating substrate, each of the color filter layers allowing a transmission of light of a color of a corresponding color pixel; a planarization insulating film formed on the color filter layers; anode layers formed on the planarization insulating film; a white electroluminescent layer formed on the anode layers; and a cathode layer formed on the white electroluminescent layer, wherein end portions of the color filter layers are tapered, and the tapered end portions of adjacent color filter layers overlap each other.

However, the prior art of record neither anticipates nor renders obvious to one ordinary skilled in the art the color electroluminescent display device comprising the various elements as claimed above in combination with the specific limitation of the

Art Unit: 2889

color filter layers having different thicknesses and end portions of thinner color filter layers being disposed on end portions of thicker color filter layers as set forth in Claim 6.

Claim(s) 7-8 are allowable because of their dependency status from Claim 6.

C. Claim(s) 11 are allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance:

The prior art of record (most comprehensive prior art of record to U.S. Pat. No. 6271902 of Ogura et al.) teaches a color electroluminescent display device having a plurality of color pixels, comprising: a plurality of color filter layers provided for the color pixels on an insulating substrate, each of the color filter layers allowing a transmission of light of a color of a corresponding color pixel; a first planarization insulating film formed on the color filter layers; anode layers formed on the first planarization insulating film; a second planarization insulating film formed so as to cover end portions of the anode layers; a white electroluminescent layer formed on the anode layers; and a cathode layer formed on the white electroluminescent layer; wherein end portions of the color filter layers are tapered, and the tapered end portions of adjacent color filter layers overlap each other.

However, the prior art of record neither anticipates nor renders obvious to one ordinary skilled in the art the color electroluminescent display device comprising the various elements as claimed above in combination with the specific limitation of the color filter layers having different thicknesses and end portions of thinner color filter layers being disposed on end portions of thicker color filter layers as set forth in Claim 11.

Art Unit: 2889

Claim(s) 12-13 are allowable because of their dependency status from Claim 11.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
